NO ↓

Dry clean following wet clean ← NO — Inspect the interface with a microscope → Is the interface clean? → YES → Connect to clean interface

NO → Fix or replace
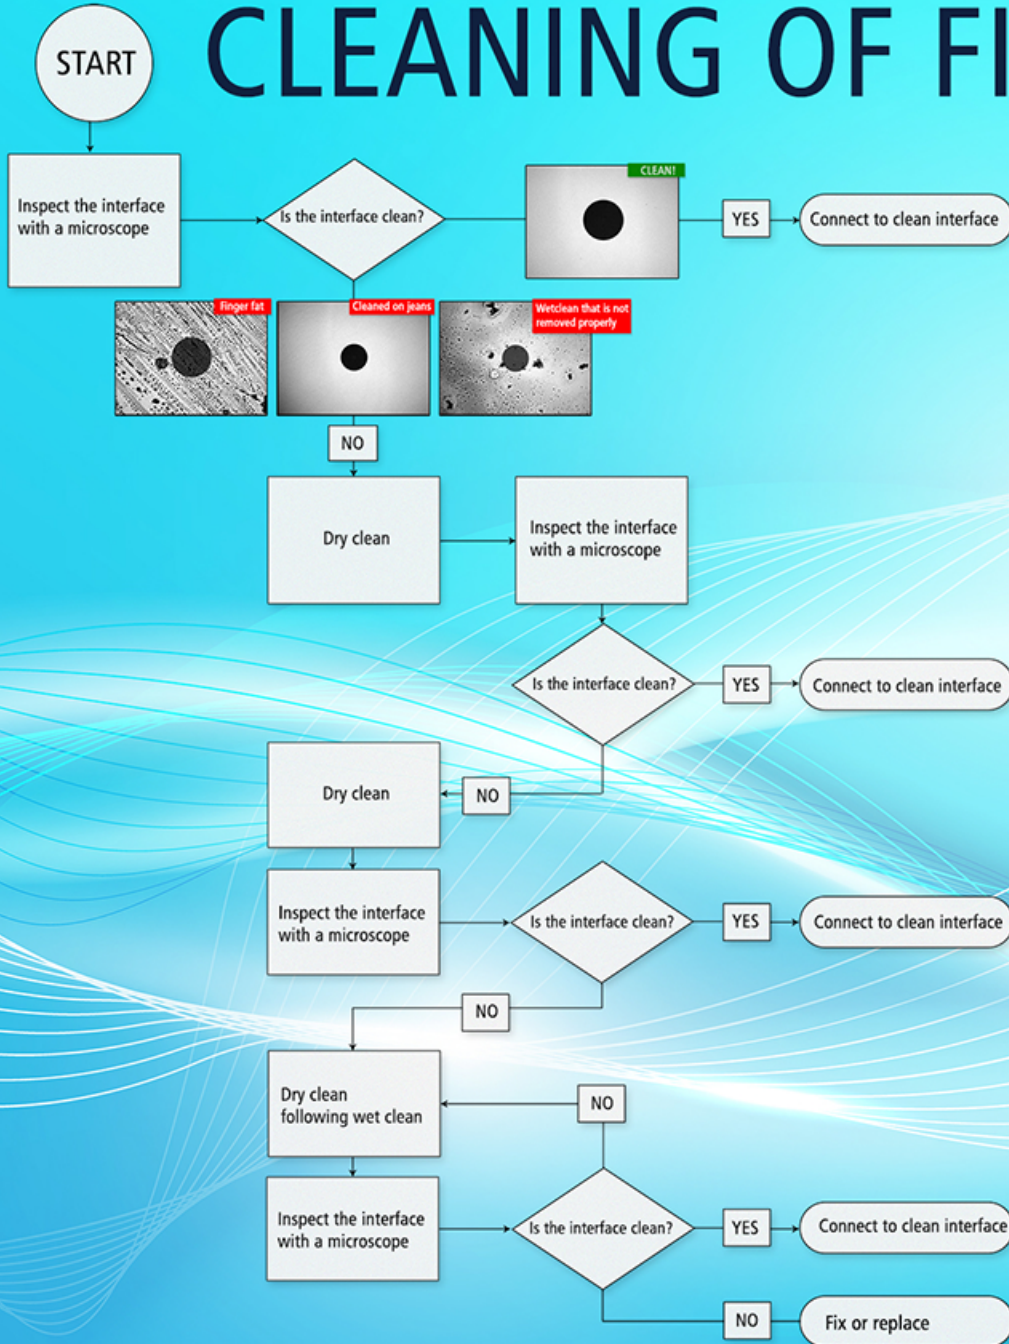

Cleaning is very important

It is hard to exaggerate the importance of cleanliness in the fiberoptic field. One unfortunate displaced grain of dust can make the difference between hassle-free operation and serious disruption.

Inspection / Microscope

Wetclean

Dryclean

How do I pick the right tools?

We have all the equipment you need to preform regular cleaning and inspection of your equipment.
We have made some cleaning sets that include some of the most important tools you may need.
